(54) Title: APPARATUS AND METHOD FOR RUNNING A RADially EXPANDABLE TUBULAR MEMBER

(57) Abstract: A tubular apparatus (20) and method, according
to which a first tubular member (34) is adapted to be lowered into
a well bore and a second tubular member (120) is connected to the
first tubular member (34). A third tubular member (102, 112) is
normally connected to the first tubular member (34) and discon-
nected from the second tubular member (102, 112), and is adapted
for movement relative to the first (34) and second tubular (120,
112) members to disconnect from the first tubular member (34)
and connect to the second tubular member (102, 112).

Special categories of cited documents:	
"A" document defining the general state of the art which is not considered to be of particular relevance	"T" later document published after the international filing date or priority date and not in conflict with the application but cited in order to understand the principle or theory underlying the invention
"B" earlier application or patent published on or after the international filing date	"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)	"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"O" document referring to an oral disclosure, use, exhibition or other means	"Z" documents member of the same patent family
"P" document published prior to the international filing date but later than the priority date claimed
